

9. Write the code to update the "excerpt" and "description" columns of the record with the "id" of 2 in the "posts" table using Laravel's query builder. Set the new values to 'Laravel 10'. Print the number of affected rows.

ans:

```
$affectedRows = DB::table('posts')
    ->where('id', 2)
    ->update([
        'excerpt' => 'Laravel 10',
        'description' => 'Laravel 10'
    ]);
```

```
echo "Number of affected rows: " . $affectedRows;
```
